

The Awarepoint Difference

Awarepoint® Real-time Awareness Solution	Unique Features	Enabling Technology
RAPID-IMPACT IMPLEMENTATION	Plug & play, dust free, non-disruptive Limited IT and facilities involvement	ZigBee Wireless Sensor Networks over 802.15.4, mesh networking, plug-in sensors
DEDICATED NETWORK	Complete, non-invasive - maintains separation from WiFi and other traffic	Independent network infrastructure Frequency 2.48 GHz
SECURE	Low impact, no interference, FCC compliant, safety certificated, No security concerns relating to HIPAA regulations and standards.	802.15.4, standard AC-powered sensors, independent network infrastructure, Tags transmit IP address only, no patient-specific data
LOW MAINTENANCE	Network calibrates automatically and continuously, fully managed service model includes 7/24/365 remote monitoring, all system maintenance and data back-up	ASP model, dedicated off-site servers
SELF-SUSTAINING	Automatically re-routes data around sensors that are RF limited; active, continuous network checks	ZigBee, self-healing wireless mesh network, internet-like architecture
REAL-TIME MONITORING	Asset locations updated continuously, time & event-triggered	Active RFID
ACTIVE ALERTING	Active location and movement monitoring, set real-time alerting rules if equipment is removed from approved areas	Real-time asset movement monitoring
USER FRIENDLY	<u>Google</u> ®-like search application, accessible from any browser-enabled device, touch-screen kiosks and hand-held devices included	Real-time asset movement monitoring
ANALYTICS ENGINE	Historical information and trends to analyze patient flow and equipment usage patterns, configurable dashboard reporting	Comprehensive data capture in an XML schema
3RD PARTY INTEGRATION	Integrates easily with other systems & applications	Standards-based open API
